

Nexa ERP — All Modules Summary

Quick-reference listing: Pages, Settings, Features, and Reports for every module. Items in **red** can be deferred to a later phase without blocking core functionality.

Module 1: Finance (FIN)

Pages

1. **Chart of Accounts** — hierarchical account list, balances, create/edit/deactivate
2. **Journal Entries** — manual journals, recurring, reversing
3. **Bank Accounts** — bank setup, balances, feed import
4. **Bank Reconciliation** — side-by-side matching, auto-match rules
5. **Budgets** — entry grid by account/period, versions, budget keys
6. **Simulations** — what-if scenarios, compare, convert to budget/journal
7. **Dimensions** — dimension types and values, hierarchies
8. **Financial Years & Periods** — (managed in Settings)
9. **Inter-Company Transactions** — cross-company journals, auto-matching, reconciliation
10. **Consolidation** — group statements, eliminations, currency translation, drill-down

Settings

1. Accounting Periods (calendar, open/close, locking)
2. Financial Years (start/end, year-end close, retained earnings account)
3. Base Currencies — Base 1 & Base 2 per company
4. Currencies table
5. Currency Exchange Rates (manual + auto-sync from online service)
6. Number Series (NL transactions, simulations)
7. VAT Codes (standard, reduced, zero, exempt, reverse charge, flat rate)
8. Rate Gain/Loss (realised/unrealised accounts, revaluation settings)
9. Sub Systems (AR, AP, Payroll, FA, Inventory sources)
10. Sub-Ledger Control Accounts (receivables, payables, stock control mappings)
11. Budget Versions
12. Budget Keys (distribution patterns across months)
13. Inter-Company Settings (account mapping, clearing accounts, auto-posting rules)
14. Consolidation Settings (group definition, ownership %, group COA mapping, elimination rules, translation method)

Features

Chart of Accounts: Account types (Asset/Liability/Equity/Revenue/Expense), sub-accounts, default VAT code, dimension tagging, block posting to header accounts

Journals: Recurring templates, reversing journals, attachments, sub-ledger source tracking

Bank: Account setup (name, number, sort code, currency, GL link), opening balances, feed import (OFX/CSV/QIF), manual entry

Bank Reconciliation: Auto-matching rules, manual matching, adjustment entries, reconciliation history/audit trail

Budgets: Multiple versions, budget keys (equal/seasonal/custom distribution), copy from prior year with % adjust, budget vs actual, dimension-based budgets, Excel import

Simulations: Create from existing data, adjust values, compare side by side, convert to budget or journal

Dimensions: Types and values, assign to transactions, hierarchies for roll-up, mandatory dimension rules per account

Inter-Company: Auto-generate counterpart entry, inter-company balance tracking, reconciliation, currency handling across companies, audit trail linking both sides

Consolidation: Group setup (parent/subsidiaries), COA mapping, elimination entries (auto-generate), currency translation (closing rate BS / average rate P&L), translation gain/loss, minority interest, manual adjustments, drill-down to subsidiary source

Reports

- Profit & Loss (P&L) — comparative periods, dimension breakdown, % of revenue
- Balance Sheet — as-at date, comparative, dimension breakdown
- Trial Balance — period or date range, detail or summary, include zero balances toggle
- Cash Flow Statement — direct or indirect method, period comparison
- Transaction Journal — all posted transactions with filters
- Nominal Ledger — account-by-account transaction listing
- VAT Return — 9-box HMRC format, Flat Rate scheme support
- VAT Audit Report — transaction-level detail per box
- Budget vs Actual — variance analysis by account, period, dimension
- Bank Reconciliation Report — reconciled/unreconciled at a date
- Key Financial Ratios — liquidity, profitability, efficiency ratios
- Aged Analysis — receivables and payables aging
- Dimension Analysis — P&L or TB grouped by dimension
- Inter-Company Transactions Report
- Inter-Company Balances Report
- Inter-Company Reconciliation Report
- Consolidated P&L
- Consolidated Balance Sheet
- Consolidated Trial Balance
- Consolidation Adjustments Report
- **Budget Summary — version comparison**
- **Bank Summary — balances across all bank accounts**
- **Currency Translation Report**
- **Subsidiary Contribution Report**

Module 2: Fixed Assets (FA)

Pages

1. **Assets Register** — master list, full lifecycle tracking
2. **Depreciation Schedule** — view/preview depreciation per asset or all
3. **Disposals** — sale, write-off, scrapping with gain/loss
4. **Revaluation** — revalue carrying amount to fair value

Settings

1. Asset Categories (default useful life, depreciation method, GL accounts)
2. Depreciation Frequencies (monthly, quarterly, annually)
3. Disposal Reason Codes
4. Asset Locations

Features

Assets Register: Asset creation (description, category, location, acquisition date, cost, useful life), asset card with full history, **photo/document attachments**, **barcode/QR tracking**, status (Active/Fully Depreciated/Disposed/Written Off), GL mapping per category, **dimension tagging**, **serial number tracking**

Depreciation: Methods (Straight Line, Reducing Balance, **Sum of Years' Digits**, **Units of Production**), preview before posting, partial year pro-rata

Disposals: Proceeds entry, gain/loss calculation, auto-generate disposal journal

Revaluation: Surplus/deficit calculation, auto-generate revaluation journals, revaluation reserve tracking

Reports

- Asset Register Report — full listing with cost, accumulated depreciation, net book value
- Depreciation Schedule Report — projected depreciation by period
- Disposal Report — disposed assets with gain/loss
- **Asset Movement Report — additions, disposals, transfers in period**
- **Asset Valuation Report — NBV by category, location, department**

Module 3: Inventory & Stock (INV)

Pages

1. **Items** — item master (stock, non-stock, service, kit/BOM)
2. **Locations** — warehouses, stores, virtual locations
3. **Goods Receipts** — receive stock (from PO or manual)
4. **Returns** — return stock to supplier
5. **Stock In / Stock Out** — manual adjustments
6. **Stock Transfers** — move between locations
7. **Delivery** — goods out to customer
8. **Stock Take / Physical Count** — count and variance posting

Settings

1. Item Categories and Sub-Categories
2. Units of Measure (with conversion factors)
3. Location Types
4. Adjustment Reason Codes
5. Return Reason Codes
6. Costing Method per item/category (FIFO, Weighted Average, Standard Cost)
7. Stock Valuation Method
8. Reorder Calculation Settings
9. Number Series (goods receipt, delivery, transfer, adjustment)
10. Item Tags / Classifications (configurable tag groups for grouping, filtering, reporting)

Features

Items: Item types (Stock/Non-Stock/Service/Kit-BOM), code/description/UOM/weight/dimensions, multiple barcodes (EAN/UPC/internal), categories, reorder point/quantity, min/max stock levels, multiple suppliers with preferred, pricing (cost/selling/price lists), images, GL mapping (stock/COGS/revenue), dimension tagging, serial number tracking, item tags/classifications (multiple tags per item for flexible grouping — e.g., "non-resale", "promotional", "fragile"), **batch/lot tracking**

Locations: Hierarchy (warehouse→zone→bin), default location per item, location-specific stock, **transit locations**, **quarantine/inspection locations**

Goods Receipts: Link to PO (auto-populate), **quality inspection hold**, partial receipt, GRN generation, update stock + GL on posting

Returns: Link to original GRN/PO, reason codes, trigger credit note, stock adjustment

Stock In / Stock Out: Reason codes (damaged/expired/found/sample), GL posting

Stock Transfers: Request→in-transit→received, inter-warehouse, cost tracking

Delivery: Link to sales order, partial delivery, delivery note, picking list, ship-to address

Stock Take: Count sheets (by location/category), enter counted qty, variance report, post adjustments

Reports

- Stock Valuation Report — value by item, location, category
- Stock Movement Report — ins/outs/transfers by period
- Reorder Report — items below reorder point
- Stock Take Variance Report
- Item Price List Report
- Stock by Tag/Classification Report — items grouped by tag
- **Stock Aging Report — items by age since last movement**
- **Dead Stock Report — no movement in X months**
- **Goods Receipt Report**
- **Delivery Report**

Module 4: Sales (SAL)

Pages

1. **Customers** — customer master, credit limits, payment terms
2. **Sales Persons** — team management, targets
3. **Pricing** — price lists, discounts, quantity breaks, date-effective
4. **Quotations** — create, version, convert to order
5. **Sales Orders** — order processing, delivery tracking, back-orders
6. **Invoices** — sales invoices, multi-currency
7. **Payments / Receipts** — payment allocation, multi-method
8. **Credit Notes** — full/partial credit against invoice
9. **Sales Forecast** — demand forecasting, AI-assisted

Settings

1. Customer Groups
2. Payment Terms (Net 30, Net 60, COD, etc.)
3. Price Lists
4. Discount Types and Rules
5. Sales Regions / Territories
6. Number Series (quotes, orders, invoices, credit notes, receipts)
7. Default Accounts (receivables, revenue, discount, shipping)
8. Invoice Email Templates
9. Sales Tax / VAT Defaults

Features

Customers: Name, addresses (billing/shipping), contacts, customer groups, credit limit/terms, default price list, default VAT code, default salesperson, currency preference, customer-specific discounts, statement preferences, VAT number, dimension defaults

Sales Persons: Details, targets, territory/region, link to user, performance summary

Pricing: Multiple price lists (retail/wholesale/trade/VIP), by customer/group/quantity break, date-effective, discount structures (% or fixed), currency-specific, promotional with date ranges

Quotations: Header + line items, versioning (revisions), status (Draft/Sent/Accepted/Rejected/Expired), convert to SO, validity period, email with PDF

Sales Orders: Create from quote or standalone, status tracking (Draft→Confirmed→Delivered→Invoiced→Cancelled), delivery date, partial delivery, back-order management, stock availability check, **recurring orders**

Invoices: From SO or standalone, status (Draft/Sent/Partially Paid/Paid/Overdue/Void), line items with qty/price/discount/VAT, multi-currency, credit note creation, proforma, **recurring invoices**, batch invoicing

Payments: Allocation to invoices (full/partial), multiple methods (bank/cash/cheque/card), overpayment handling, FX gain/loss, AI-assisted matching, **direct debit batches**

Credit Notes: Full or partial credit, reason codes, stock return linkage, apply to outstanding invoices or refund

Sales Forecast: Historical analysis by item/customer/period, AI-assisted generation, manual adjustment, forecast vs actual, feed into Purchase Plans

Reports

- Sales by Customer Report
- Sales by Item Report
- Sales by Salesperson Report
- Sales by Period Report (daily, weekly, monthly)
- Outstanding Invoices / AR Aging Report
- Customer Statement
- Sales Order Backlog Report
- Quote Conversion Report (quotes→orders ratio)
- Sales Forecast vs Actual
- Credit Note Report
- **Top Customers Report**
- **Price List Report**

Module 5: Purchasing (PUR)

Pages

1. **Suppliers** — supplier master, payment terms, bank details
2. **Supplier Items** — supplier-specific codes, prices, lead times, volume pricing
3. **Supplier Contracts** — **formal agreements, contracted pricing, volumes**
4. **Purchase Orders** — PO creation, send to supplier
5. **Supplier Invoices (AP)** — 3-way matching, multi-currency
6. **Payments** — payment runs, BACS, allocation
7. **Purchase Plans** — **auto-generate from reorder/forecast, suggested POs**

Settings

1. Supplier Groups
2. Payment Terms
3. Number Series (POs, supplier invoices, debit notes, payments)
4. Default Accounts (payables, purchase, freight)
5. 3-Way Matching Tolerances (price %, quantity %)
6. Purchase Tax / VAT Defaults
7. Payment Run Settings (BACS format, payment day)

Features

Suppliers: Name, addresses, contacts, groups, payment terms, default currency, VAT number, bank details, **rating/evaluation**, notes and history, dimension defaults

Supplier Items: Supplier item code, supplier price/currency, lead time, min order qty, preferred supplier flag, price breaks / volume pricing (discounts, extra pieces, or lower cost at higher volumes)

Supplier Contracts: **Start/end date, terms, value, contracted pricing, volume commitments, status, renewal reminders, document attachments**

Purchase Orders: Create manually or from reorder trigger, status (Draft/Sent/Partially Received/Fully Received/Invoiced/Cancelled), expected delivery date, email PO with PDF, **blanket/framework POs (call-off)**

Supplier Invoices: 3-way matching (PO + GRN + invoice), price/quantity variance handling, status (Draft/Matched/Approved/Paid/Disputed), multi-currency, **recurring supplier invoices**, debit note creation

Payments: Allocation to invoices (full/partial), payment run (batch), methods (BACS/cheque/direct debit), FX handling, remittance advice generation, **early payment discount**, **payment scheduling**

Purchase Plans: **Auto-generate from reorder points**, **auto-generate from sales forecast**, **suggested POs grouped by supplier**, **review/approve before creating POs**, **MRP integration**

Reports

- Purchase by Supplier Report
- Outstanding AP / AP Aging Report
- PO Status Report (open, overdue, partially received)
- Payment Run Report
- **Purchase by Item Report**
- **Purchase by Period Report**
- **Supplier Statement**
- **3-Way Matching Exceptions Report**
- **Supplier Spend Analysis**
- **Purchase Price Variance Report**
- **Supplier Performance Report (on-time delivery %, quality)**

Module 6: POS

Pages

1. **POS Invoice (Touch Screen)** — full-screen POS optimised for touch
2. **Tills** — till/register management, opening/closing, cash in/out

Settings

1. POS Terminal Setup (location, till, receipt printer)
2. Quick-Add Item Grid Configuration
3. Payment Methods per Terminal
4. Receipt Template (header, footer, logo)
5. Discount Permissions (who, max %)
6. Void/Refund Permissions
7. Number Series (POS invoices, receipts)
8. **Tax Rounding Rules**
9. **Shift Schedule Settings**

Features

POS Invoice: Item search by code/barcode/name, quick-add grid, qty adjustment, line discount, customer lookup (optional — walk-in default), split payment (cash + card), change calculation, receipt printing (thermal), **hold/park and resume**, void line/transaction (reason + supervisor override), returns/refunds at POS, discount (% or fixed, requires permission), **price override (supervisor approval)**, VAT display, end-of-day summary

Tills: Opening (enter float), closing (count cash, reconcile), cash in/out, till assignment to user/shift, variance report

Reports

- Daily Sales Summary (by terminal, by user)
- Till Reconciliation Report

- Void/Refund Report
- POS Sales by Item Report
- POS Sales by Payment Method
- Discount Report (by whom, reason)
- Hourly Sales Report (peak hours)
- Cashier Performance Report

Module 7: CRM

Pages

1. **Prospects** — potential customers, scoring, source tracking
2. **Leads / Opportunities** — pipeline stages, kanban board
3. **Activities** — calls, emails, meetings, tasks, calendar view
4. **Campaigns** — marketing campaigns, targeting, ROI tracking
5. **Email Templates** — reusable templates with variables
6. **Contacts** — directory across all prospects/customers

Settings

1. Lead Pipeline Stages (customisable names and order)
2. Activity Types
3. Lead Sources
4. Win/Loss Reason Codes
5. Prospect Scoring Rules
6. Campaign Types
7. Email Sending Configuration (SMTP, sender)
8. Number Series (leads, activities, campaigns)
9. Default Salesperson Assignment Rules

Features

Prospects: Company/contact details, status (New/Contacted/Qualified/Unqualified/Converted), convert to customer (one-click), scoring (manual or AI), source tracking, notes and history

Leads: Prospect/customer link, estimated value, probability, pipeline stages (New/Qualification/Proposal/Negotiation/Won/Lost), expected close date, kanban + list views, win/loss reason codes, competitor tracking, documents, assign to salesperson

Activities: Types (Call/Email/Meeting/Task/Note), link to prospect/customer/lead/contact, due date/priority/assigned to, status (Planned/Completed/Cancelled), calendar view, follow-up reminders, call outcomes and meeting notes

Campaigns: Name, type, budget, dates, target audience, status, response/conversion tracking, ROI calculation, email template integration

Email Templates: Variable placeholders, HTML and plain text, categories, preview with sample data

Contacts: Name/title/email/phone/mobile, link to prospect or customer, role (decision maker/influencer/technical/billing), communication preferences, duplicate detection

Reports

- Sales Pipeline Report (by stage, value, probability)
- Lead Conversion Report
- Activity Report (by user, type, date range)
- Overdue Activities Report
- Campaign Performance Report (ROI, response rate)
- Prospect Source Analysis
- Sales Forecast from Pipeline (weighted by probability)

- [Win/Loss Analysis Report](#)
-

Module 8: Warehouse (WH)

Pages

1. **Warehouses** — warehouse master, type, manager
2. **Areas / Zones** — logical divisions (receiving, storage, picking, shipping, quarantine)
3. **Positions / Bins** — individual storage locations, capacity, barcode
4. **Put-Away** — inbound placement, suggested positions, scan confirmation
5. **Picking** — order fulfilment, strategies, batch picking
6. **Packing** — [pack station](#), [carton selection](#), [weight](#), [labels](#)
7. **Dispatch** — [outbound shipment](#), [carrier](#), [tracking](#)
8. **Stock Enquiry (by Position)** — drill-down warehouse→area→bin

Settings

1. Warehouse Structure Configuration
2. Position Naming Conventions
3. Put-Away Rules (by item category, size, velocity)
4. Picking Strategy per Warehouse/Zone
5. [Carrier / Shipping Provider Setup](#)
6. Barcode Format Configuration
7. [Packing Material Types](#)
8. Number Series (put-away, pick, pack, dispatch)

Features

Warehouses: Name, address, type (main/satellite/bonded/cold storage), [operating hours](#), manager, GL account link

Areas / Zones: Types (Receiving/Storage/Picking/Packing/Shipping/Quarantine>Returns), [temperature requirements](#) ([ambient](#)/[chilled](#)/[frozen](#)), [access restrictions](#) ([hazardous](#))

Positions / Bins: Code (A-01-03-02), type (shelf/pallet/floor/bulk), capacity (weight/volume/count), current contents and fill level, barcode/QR, status (Available/Full/Reserved/Blocked)

Put-Away: Suggested position (rules-based), scan confirmation, [split put-away](#), task assignment

Picking: Pick list from sales orders, strategies (FIFO/FEFO/[zone](#)/[wave](#)), [batch picking](#) ([multiple orders](#)), scan confirmation, task assignment, short pick handling

Packing: [Packing station UI](#), [package selection](#), [weight capture](#), [packing slip](#), [shipping label](#)

Dispatch: [Scheduling](#), [carrier assignment](#), [tracking number](#), [proof of dispatch](#), [loading dock allocation](#)

Stock Enquiry: Drill-down from warehouse to bin, stock on hand/reserved/available, movement history per position

Reports

- Warehouse Utilisation Report (fill level by zone/position)
 - Stock by Position Report
 - Position Empty/Available Report
 - [Picking Performance Report](#) ([picks/hour](#), [accuracy](#))
 - [Put-Away Performance Report](#)
 - [Movement History Report](#)
 - [Dispatch Report](#) ([by carrier](#), [date](#), [destination](#))
 - [Slow-Moving Stock by Position](#)
-

Module 9: Production / Manufacturing (PRD)

Pages

1. **Bill of Materials (BOM)** — product structure, multi-level, versioning
2. **Routings** — process steps, work centres, times
3. **Machines / Work Centres** — shop floor resources, capacity
4. **Production Plan** — aggregate planning, MRP, capacity check
5. **Production Orders** — individual manufacturing orders
6. **Operations** — routing step progress within a production order
7. **Batches / Lots** — batch tracking, attributes, traceability
8. **Materials** — material requirements, availability, substitution
9. **Quality Control** — inspection plans, results, non-conformance

Settings

1. BOM Types and Categories
2. Operation Types
3. Work Centre Types
4. Scrap Reason Codes
5. Production Order Number Series
6. Batch Number Series and Format
7. MRP Parameters (lead times, safety stock, lot sizing rules)
8. Shift Patterns for Capacity Planning
9. Quality Inspection Templates
10. Cost Allocation Methods (standard cost, actual cost)

Features

BOM: Multi-level (sub-assemblies), component list (item/qty/UOM/scrap %), versioning, status (Draft/Active/Obsolete), where-used enquiry, cost roll-up, phantom BOM support

Routings: Operation sequence, work centre/machine, setup/run time, versioning, alternative routings, outsourced operations

Machines / Work Centres: Name/type/capacity/cost rate, availability calendar (shifts/maintenance), status (Available/Running/Maintenance/Down), OEE tracking

Production Plan: Plan by period, demand sources (forecast/orders/reorder/manual), capacity check, MRP (explode through BOMs), generate production orders, what-if scenarios

Production Orders: Product/quantity/BOM/routing/dates, status (Planned/Released/In Progress/Completed/Cancelled), material reservation, material issue, partial completion, scrap/waste recording, by-product and co-product support

Operations: Status (Pending/Setup/Running/Complete/On Hold), actual time recording, operator assignment, quality checkpoints, operation-level scrap

Batches: Auto or manual numbering, attributes (potency/grade/colour), splitting/merging, full traceability (forward/backward), expiry management

Materials: Requirements from BOM explosion, availability check, substitution (alternatives), issue and return from shop floor

Quality Control: Inspection plans (what to check, tolerances), results recording, pass/fail/conditional release, non-conformance reporting, corrective actions

Reports

- Production Order Status Report
- Work in Progress (WIP) Report
- Material Usage Report (planned vs actual)
- Production Cost Report (standard vs actual)
- BOM Cost Roll-Up Report
- Scrap/Waste Report

- Machine Utilisation Report
- OEE Report (Availability x Performance x Quality)
- MRP Exception Report (shortages, excess)
- Batch Traceability Report (forward/backward)
- Quality Inspection Report
- Capacity Planning Report (load vs capacity)
- Production Schedule (Gantt view)

Module 10: Projects & Job Costing (PRJ)

Pages

1. **Projects** — project master, hierarchy (project→phases→tasks)
2. **Project Transactions** — all financial transactions against a project
3. **Time Sheets** — weekly time recording, billable/non-billable
4. **Project Schedule** — Gantt, dependencies, milestones, % complete
5. **Project Budget** — cost/revenue budgeting by category and phase
6. **Expenses** — project expense claims, reimbursement

Settings

1. Project Types and Categories
2. Cost Categories
3. Billing Rate Tables (by role, project type, client)
4. Expense Categories and Limits
5. Timesheet Approval Rules
6. Overhead Allocation Rates
7. Revenue Recognition Methods (% completion, milestone, time-based)
8. Number Series (projects, timesheets, expense claims)
9. Working Hours per Day/Week

Features

Projects: Name/code/client/manager/dates, types (Fixed Price/Time & Materials/Internal/Retainer), status (Planning/Active/On Hold/Completed/Cancelled), hierarchy (project→phases→tasks), team assignment, billing method, documents

Project Transactions: Types (labour/materials/expenses/overheads), source linking (timesheet/PO/expense claim), revenue recognition entries, WIP journals, drill-down to source

Time Sheets: Weekly grid (days x projects/tasks), daily entry with hours/description, billable flag, overtime, submission and approval, timer/stopwatch mode, copy from previous week

Project Schedule: Task list with dependencies, Gantt chart, milestones, % complete, critical path, resource allocation, baseline vs actual

Project Budget: By cost category (labour/materials/expenses/subcontract/overheads), by phase/task, versions (original/revised), budget vs actual variance, EAC calculation, revenue budget and billing schedule

Expenses: Date/category/amount/project/description/receipt, categories (travel/accommodation/meals/supplies), mileage calculator, per diem, reimbursement tracking, billable flag

Reports

- Project Profitability Report (revenue vs cost vs margin)
- Project Status Report (schedule, budget, % complete)
- Timesheet Report (by employee, project, date range)
- Budget vs Actual Report
- Expense Report (by project, employee, category)

- **Utilisation Report** (billable hours / available hours)
- **WIP Report** (unbilled work in progress)
- **Resource Allocation Report**
- **Billing Report** (invoiced vs unbilled)
- **Project Pipeline Report** (upcoming projects)

Module 11: HR & Payroll (HR)

Pages

1. **Employees** — employee master, personal/employment/tax details
2. **Contracts** — employment contracts, salary, benefits, amendments
3. **Job Positions** — org structure, grades, headcount
4. **Checklists** — onboarding/offboarding task tracking
5. **Appraisals** — performance reviews, goals, ratings
6. **Leave Management** — holiday/absence requests, calendar, balances
7. **Skills & Qualifications** — skill tracking, certifications, expiry
8. **Training** — courses, enrolment, completion, costs
9. **Payroll (UK)** — gross to net, PAYE, NI, pension, RTI — use third-party payroll service/vendor for calculations and HMRC integration

Settings

1. Departments and Org Structure
2. Job Grades/Bands and Salary Scales
3. Leave Types and Entitlement Rules
4. Public Holiday Calendars (by region)
5. **Appraisal Cycle Configuration**
6. **Checklist Templates**
7. **Skill Categories**
8. **Training Providers**
9. **Payroll: Tax Bands, NI Thresholds, Pension Thresholds** (updated annually)
10. **Pay Elements** (addition and deduction types)
11. **BACS Bureau Configuration**
12. **HMRC Gateway Credentials** (for RTI)
13. Number Series (employee numbers)
14. Working Pattern Templates

Features

Employees: Personal details (name/DOB/address/phone/email/emergency contact), employment details (number/hire date/department/title/manager), status (Active/Probation/Suspended/Terminated/Retired), **photo**, bank details, tax details (tax code/NI number/student loan), right to work documents, attachments, **self-service access**

Contracts: Type (permanent/fixed-term/zero-hours/contractor), start/end, salary/rate, working hours (full/part-time), probation period, notice period, **benefits** (pension/healthcare/car allowance), amendments history, **renewal reminders**

Job Positions: Title/department/grade/reporting line, status (Open/Filled/Frozen), headcount (budgeted vs actual), **job description and requirements**, salary range per grade

Checklists: Templates (Onboarding/Offboarding/Probation Review), task items with assignee/due date/completion, auto-trigger on status change, document collection tracking

Appraisals: Cycles (annual/bi-annual/quarterly), goal setting and tracking, self-assessment + manager assessment, customisable rating scales, development plans, history, 360-degree feedback (optional)

Leave: Types (Annual/Sick/Maternity/Paternity/Unpaid/TOIL/Compassionate), entitlement calculation (by contract/tenure/pro-rata), request and approval workflow, team calendar, carry-over rules, **Bradford Factor**, public holidays

Skills: Categories and individual skills, proficiency levels, certification expiry dates, renewal reminders, skills gap analysis

Training: Courses (name/provider/cost/duration), requests and approval, schedule and enrolment, completion tracking and certificates, cost tracking, mandatory training tracking

Payroll (UK): Gross to net (basic + additions - deductions), additions (overtime/bonus/commission/allowances/SSP/SMP/SPP), deductions (PAYE/NI employee+employer/pension/student loan/attachment of earnings), tax code processing (cumulative and week 1/month 1), NI categories, workplace pension auto-enrolment, payslip generation, BACS file, RTI (FPS/EPS), year-end (P60, final FPS), starter/leaver (P45/P46), salary sacrifice, multiple pay frequencies — **Recommend integration with third-party payroll provider (e.g., Staffology, Moorepay, BrightPay API) rather than building payroll engine in-house**

Reports

- Employee Directory Report
- Headcount Report (by department, location, status)
- Absence Report (by employee, type)
- Leave Balance Report
- Employer Cost Report (salary + employer NI + employer pension)
- Turnover Report (starters/leavers by period)
- Appraisal Status Report (due, overdue, completed)
- Skills Matrix Report
- Training Report (completed, upcoming, costs)
- Payroll Summary Report (gross, deductions, net by department)
- Payroll Variance Report (period-over-period)
- P11 Deductions Working Sheet
- Gender Pay Gap Report
- Right to Work Expiry Report

AI Engine (Cross-Module Intelligence Layer)

Already Specified (in existing PRD/Epics)

#	Capability	Source	Defer?
1	AI Copilot (conversational, multi-turn, streaming)	E5.S1-S2	No — core
2	Action Framework (propose→review→confirm, guardrails)	E5.S3	No — core
3	Anomaly & Fraud Detection (duplicates, suspicious patterns)	FR155-157	Yes — Phase 2
4	Cash Flow Forecasting (8-52 weeks, scenarios)	FR153	Yes — Phase 2
5	Prediction Explainability (POST /ai/explain)	E5.S4	Yes — Phase 2
6	Document Understanding (extract fields, learn from corrections)	FR164-167	Yes — Phase 2
7	Autonomous Workflows (scheduled/event/chained, circuit breaker)	E5c	Yes — Phase 2
8	Ad-Hoc NL Queries (natural language→SQL→table/chart)	E25.S4	Yes — Phase 2

New / Expected (not yet in specs)

#	Capability	Defer?
9	Risk Detection (credit, supply chain, cash flow, regulatory, operational)	Yes — Phase 3
10	Data Quality Improvement (missing fields, duplicates, stale data, health score)	Yes — Phase 3
11	End-to-End Trace Explanations (cross-module causal chains)	Yes — Phase 3

#	Capability	Defer?
12	Sales Forecast & Demand Prediction (feed into Purchase/Production)	Yes — Phase 3
13	Smart Feed / Role-Based AI (copilot adapts per user role)	Yes — Phase 2

See `ai-engine.md` for full detail on each capability.

Cross-Cutting Frameworks

#	Framework	Defer?
1	Report Runner (T8 template, parameter panel, export, schedule, AI summary)	No — core
2	Batch Job Runner (parameter form, progress, background, notifications)	No — core
3	Jobs & Reports Monitor (in-progress, recent, scheduled)	Yes — Phase 2
4	Copilot Chat History page	Yes — Phase 2
5	Copilot Context Monitor (token usage slider)	Yes — Phase 2
6	Form Creator (HTML templates, versioning, batch PDF, email)	No — core
7	Exports & Imports Framework (CSV/Excel, import wizard, validation)	No — core

See `cross-cutting.md` for full detail.

Approval Workflow Module (Future)

Deferred — to be added as a separate cross-cutting module.

A generic approval workflow engine that works across all modules:

- Configurable approval rules per document type (PO, Sales Order, Invoice, Journal, etc.)
- Approval triggers: value threshold, discount %, specific account, new supplier, etc.
- Single-step or multi-step approval chains
- Role-based approvers (by department, value band, document type)
- Substitution / delegation (when approver is absent)
- Email/push notification to approvers
- Approve/reject with comments
- Approval history and audit trail
- Dashboard: pending approvals for current user

Applies to: Purchase Orders, Sales Orders, Journals, Expense Claims, Leave Requests, Credit Notes, Stock Adjustments, Budget Changes, and any future document types.
